Add layers to your photo to edit and create the perfect image. Chapter 3 teaches you how to do that. Mastering Photoshop's expertise lies in its many different tools, which enable you to alter the color and values of a photo; blend different images; combine textures and colors; and create borders, gradients, and any number of effects. A good knowledge of these tools enables you to create a wide variety of effects using Photoshop alone. No matter what you want to do with the program, you must know how to use its tools. Although Photoshop has many such tools, they can also be divided into three categories: general-purpose tools, special-purpose tools, and filter tools. Doing general-purpose tasks The more you use Photoshop's general-purpose tools, the more your skills will improve. This section helps you understand the basic tools of Photoshop. (However, feel free to skip the next two sections if you are a beginner and just want to use Photoshop to create image files.) After you become comfortable working with the basic tools in this section, you may want to skip to the next section, which explores the special-purpose tools. Finally, this section describes the filters and how they work. You can get started using Photoshop by creating a new file and starting with the easy stuff. The file should be only one layer, a solid color, and size your master file to 300dpi and 300 pixels wide and high. Taking the plunge and creating new layers Open a new document from the Open dialog box. To create a new document, follow these steps: 1. Choose File⇒New. The Open dialog box appears, showing the name of the current Photoshop document and the name of the new document. For this exercise, call the new document Photo One. 2. Click the Browse button next to the File Name text box, navigate to the path of your image file, select it, and click Open. The new document appears with a solid blue color. 3. Click the arrow in the upper-right corner to bring up

the Fill and Stroke controls and then set the Opacity of the background to 50% (see Figure 9-1). Photoshop offers two ways to manipulate the Fill and Stroke settings. The first is using a slider control to change the opacity (see Figure 9-1). Simply use the slider to drag the Opacity slider

Polarization-Sensitive Ferroelectric Oxide Nanobelts with Axial and/or Radial Polarization for Efficient Back-Surface Plasmon Resonance Sensing Applications. Back-surface plasmon resonance (BS-SPR) sensors are widely used in various disciplines of research, especially in biomedical and environmental applications. However, the applications of BS-SPR sensors are severely restrained by intrinsic spectral shift in the optical response due to optical inhomogeneity and birefringence in the nanophotonic structures. Recently, birefringent and nonlinear polarization-responsive nanophotonic structures are developed in order to simultaneously obtain axially and/or radially polarized optical responses. Herein, we demonstrate a simple method for growing polarization-responsive nanobelts by employing the thermal evaporation and plasma oxidation of TiO₂ nanostructures. A tunable polarization-sensitive response is observed for TiO₂ nanobelts with high efficiency. The polarity of the surface plasmons in the nanobelts depends on the incident light polarization, and the extinction ratio of the polarization-sensitive response can reach approximately 5.4 dB. This unique property of the polarization-sensitive nanobelts will advance the applications of nanophotonic devices and biosensors.

Q: Sort divs created by foreach loop php (not sure why) Been trying to search for a solution for this problem but can't find a solution. I have the following code: `$games=array(); while($game=mysqli_fetch_assoc($result)) { $games[] = $game; } foreach($games as $game) { $game['image'] = ""; } I want to order the div's created by the foreach loop, so the order is title, image, alt, and name. But when I order it, it goes like this: image, name, title, alt. I don't understand why. What am I doing wrong here? A: Change the order of the arguments: $game['title'] = 'title'; $game['alt'] = 'alt'; $`

G. Brush Tip Shape (The Brush Tool) H. The Filter Gallery The Filter Gallery is an advanced set of effects that allow you to add textures, shadows, and other types of effects to an image. You can use it to create special visual effects, such as a rippling surface, inside the Camera Raw section of the software. I. The History Panel (The History Panel) J. The History Panel The History Panel is a simple but useful feature to use, as it allows you to undo, redo, and experiment with different actions. The number of brush presets or the brushes themselves might seem overwhelming, but in reality they are a great way to make images look realistic. Here are a few tips to help you find the right brush for your project:

- * **Brush Controls:** Click the little gear symbol or a brush shape to select a preset brush. If you don't like the preset brush, simply click the brush to edit it.
- * **Brush Tip Shape:** This is the shape used when you create a brush or use the brush tools. The default shape is a square; use a rectangle or circle if you want.
- * **Size and Opacity:** This determines the size of your brush and its opacity, which is represented by the number next to it (see Figure 2-6).
- * **Tone:** You can use the Layer Mask options to apply a specific color or an effect to only some of the brush strokes. You'll learn about layer masks in Chapter 7
