The Story of Tachyon: The Fringe is set in the 26th century, where mankind has left Earth to colonize the far future. Bridging the gap between science and the public: the JNUSAT mission. Since its creation in 1972, the National Space Development Agency of Japan (NASDA) has been dedicated to leading the space development process in Japan. Today, NASDA and its research and development department work on the further development of technologies in a variety of fields, including manned and unmanned space missions, exploration and utilization of space resources, and long-distance information transmission. NASDA is supporting Japan's participation in a global satellite-based navigation system, known as the Global Navigation Satellite System (GNSS). In order to deal with problems in the GNSS, such as a limitation of the earth's orbit and the uncertain existence of GPS satellites, NASDA is developing JNUSAT (Jikei National University Satellite), the first domestically developed GNSS satellite. The JNUSAT project, which is based on the research of Jikei National University of Japan, is expected to play an important role in the future of the international space-based navigation system. This can lead to the incorrect assumption that even patients with PVE and normal coronaries are at high risk of
